

INTERPOL

# EUROPEAN UNION'S BEST PRACTICES IN FIGHTING WILDLIFE CRIME LINKED TO THE INTERNET

Report for  
law enforcement  
practitioners

This project is co-funded  
by the Internal Security Fund  
of the HOME Affairs of the European Union

JANUARY 2021

INTERPOL - For official use only

## ■ ACKNOWLEDGEMENTS

This report – “EU Best Practices in Fighting Wildlife Crime Linked to the Internet” – was drawn up by the INTERPOL Environmental Security Programme (ENS) as a product of the EU Wildlife Cybercrime Project to compile existing best practices from European Union (EU) enforcement authorities and other relevant agencies regarding the methods and tools used to investigate wildlife crime linked to the Internet.

The purpose of this report is to raise awareness among EU Member States about the methods used to fight wildlife crime linked to the Internet and, accordingly, assist them in scaling up their efforts to address this crime trend. Where appropriate, Member States are encouraged to make full use of the Report in their investigations of cases of wildlife crime linked to the Internet in accordance with EU Directives. At the same time, the report also contributes towards Decision 18.84 paragraph a) adopted by the 18th Conference of the Parties to CITES (CoP18) regarding best practices and model domestic measures for addressing wildlife crime linked to the Internet.

This report was funded by the European Union’s Internal Security Fund — Police. INTERPOL would like to express its gratitude to the European Commission Directorate-General for Migration and Home Affairs for its generosity in supporting the creation of this report.

INTERPOL would also like to thank the experts who agreed to participate in the interviews and review the document. Their knowledge and experience is invaluable. For reviewing purposes, ENS consulted the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) Secretariat and EUROPOL as well as some partners belonging to the Coalition to End Wildlife Trafficking Online, such as the World Wide Fund for Nature (WWF), TRAFFIC and the International Fund for Animal Welfare (IFAW).

## ■ DISCLAIMER

This report is intended for law enforcement authorities, CITES authorities and European Union agencies. The contents of this report are the sole responsibility of the authors and can in no way be taken to reflect the views of the European Commission.

The report is disseminated by INTERPOL in the framework of the EU Wildlife Cybercrime Project. This publication may not be reproduced in whole or in part or in any form without prior express permission from the copyright holder. The right to reproduce this publication may be granted by INTERPOL on the condition that it is cited as the source.

INTERPOL has taken all reasonable precautions to verify the information contained in this publication. However, the published material is distributed without warranty of any kind, either express or implied. The responsibility for the interpretation and use of the material lies with the reader. In no event shall INTERPOL be liable for damages arising from its use. INTERPOL takes no responsibility for the continued accuracy of the information contained herein or for the content of any external website referenced.

The recommendations provided in this report should not be interpreted as inciting the readers to adopt practices or conduct activities non-compliant with the applicable legal framework. INTERPOL does not endorse or recommend any commercial product, process, tool, software or service. Any mention of commercial products, processes, tools, software or services in this report cannot be construed as an endorsement or recommendation.

Any quotes from outside experts included in this report are included for informational purposes only, have not been edited by INTERPOL, and do not necessarily reflect the views or policies of INTERPOL, its Member Countries, its governing bodies, or contributory organizations.

## ■ EXECUTIVE SUMMARY

Transnational organized criminal groups exploit wildlife across the globe, threatening protected species, affecting vulnerable communities, undermining national economies, jeopardizing food security and, most notably, increasing the risk of spreading infectious diseases. Since 2010, INTERPOL, through its Environmental Security Programme (ENS), is supporting Member Countries in the fight against environmental crime – included wildlife crime and its facilitation via Internet.

Within this context, the report “European Union’s Best Practices in Fighting Wildlife Crime Linked to the Internet” is the result of INTERPOL’s partnership with the European Union (EU) Wildlife Cybercrime Project, supported by the EU Internal Security Fund — Police.

The report “European Union’s Best Practices in Fighting Wildlife Crime Linked to the Internet” offers a collection of best practices currently in place in the EU to investigate wildlife crime linked to the Internet while giving an overview of the crime trend in Europe. To do so, the document follows a challenge-best practice approach, presenting issues and solutions highlighted by the representatives of law enforcement authorities from the seven EU Member States who kindly agreed to participate to this exercise. The suggested best practices are divided in

four main sections: Legal framework, Case building, Investigation tools and techniques, and Cooperation. In the few cases in which best practices were not identified or were incomplete, INTERPOL made suggestions based on the expertise of Organization’s officials as well as on ideas compiled during the preparation of the “Wildlife Crime Linked to the Internet – Practical Guidelines for Law Enforcement Practitioners” document, and material from the Consortium partners’ publications. Within this context, the report “European Union’s Best Practices in Fighting Wildlife Crime Linked to the Internet” and the “Wildlife Crime Linked to the Internet – Practical Guidelines for Law Enforcement Practitioners” are complementary documents for a deep understanding of this crime trend.

The recommendations made in the sections on Case building and Investigation tools and techniques, are mainly directed towards investigators, forensic specialist, cyber inspectors and other enforcement professionals fighting wildlife crime linked to the Internet on a regular basis. However, these best practices need to be backed up by strategic systemic actions. The sections on Legal framework and Cooperation attempt to formulate best practices that may be adopted on a higher level to adequately support the work of law enforcement authorities and agencies when addressing this crime.
