Annual Report – Nile Crocodile Ranching

The response is in line with the letter you wrote regarding Resolution Conf.11.16 on ranching and trade in ranched specimens of species transferred from Appendix I to II which requires that each country that has made a successful proposal to transfer a population of a species from Appendix I to II for ranching purposes should submit to the Secretariat annual reports on relevant aspects of each approved operations.

We have in the past submitted general records of ranching but not to the detail we hereby submit. Due to the passage of time, we wish to submit the report for the period 2000 to date. Should there be any need to provide details before 2000, let us know immediately.

We hereby submit the following information

1. The Status of wild population;

Aerial and ground surveys of crocodiles have been undertaken in major water systems for the purpose of estimating the density of crocodiles (NPWS 1993 cited from SADC 1987; Jachmann 1996; Changwe 1996; Nyirenda 1997; Raine & Stone 2000; Mupemo 2003; Banda 2004; Changwe 2004; Kampamba et al 2004, Nyirenda 2004). The surveyed areas were mainly National Parks/Game Management Areas where safari hunting is permissible.

The most recent surveys were undertaken in the month of November 2003 in the major water systems. The programme involved a combination of aerial and ground counts. Preliminary results estimated the population of the species at 13,702 animals for the surveyed selected water systems to allow for the annual hunting quota of 300 animals per annum since 2004.

2. Number of specimens (eggs, young or adults) taken annually – see attached table

3. An estimate of the percentage of the production of the wild population that is taken from the ranching operation - see attached table

4. Number of animals released and their survival rates estimated on the basis of surveys and tagging programmes;

At the moment, no animals are released back into the wild but there is 10% that can be released at Zambia Wildlife Authority's request. The Nile crocodile does not co-exist easily with human populations. There is evidence in Zambia of predation by crocodiles on human beings causing enormous outcry from the public making release programmes controversial. The species population has therefore been managed to maintain it at an acceptable level to safeguard the interests of the rural communities through safari hunting, egg collection and live captures for ranching. However, release of crocodile is possible in National Parks whenever there are signs of population decline but so far no such a scenario has arisen.

5. Mortality rate in captivity - see attached table

6. Production, sales and exports of products - see attached table

7. Conservation programmes and scientific experiments carried out in relation to the ranching operation or the wild population;

The annual quota of 300 for safari hunting provides revenue which is shared between government and local communities living in the hunting blocks. This in turn has encouraged rural communities to conserve crocodiles the species negative impact is compensated by economic returns generated from safari hunting.

Yours faithfully,

Zook Muleya

**Acting Director of Research, Planning and Information
For/Director General.**
