ITTO Comments – CITES CoP19 – 12 September 2022

COMMENTS ON CITES PROPOSALS FOR TREE SPECIES TO BE TABLED AT COP 19		
<i>Proposal</i>	<i>Country-specific Comments</i>	<i>ITTO Position</i>
1. Include <i>Handroanthus Roseodendron and Tabebuia</i> genera in Appendix II with Annotation 17	<p>Mexico suggested to strengthen the proposal with more information about the 3 genera, which currently focuses mainly on <i>H. serratifolius</i> and <i>H. impetiginosus</i>. Mexico believes that data on more species would provide more information on how easily each can be distinguished from other species in the genera. Mexico recommends that each species/genera proposed for listing should meet each of the listing criteria, and it should be specified for each whether it is being proposed due to trade pressure or due to similarity to other species. Mexico observed discrepancies in the taxonomy/nomenclature used in the proposal for some of the species in these genera (and the number of species in the genera) compared to standard references such as that maintained by Kew Gardens. Trade statistics presented in the proposal are not up to date; the proposal should include trade data for at least the past 10 years and should correctly indicate the major species in international trade. The proposal should describe how international trade has impacted the conservation of the species and substantiate if such trade is a threat to their wild populations. Mexico suggested that the proposal be enriched with more information on the biology and distribution of the species in the three genera, including maps of distribution in all range states. Mexico states that it is possible to distinguish between Mexican species of these genera based on morphological characteristics of the wood. Mexico feels that the case for annotation 17 needs to be strengthened since the proposal mentions only sawnwood in terms of international trade in products from these genera. It suggests annotation 6 would be more appropriate if this proposal is approved.</p> <p>Guyana has several species of <i>Tabebuia</i> that are utilized for timber and commercial purposes such as White Cedar (<i>T. insignis</i> var. <i>insignis</i>) and <i>Hakia</i> (<i>T. capitata</i>; <i>T. serratifolia</i>; <i>T. subtilis</i>); but these species are rarely harvested. Guyana’s main issue with this proposal is timber species washiba (<i>Handroanthus</i> spp. - formerly <i>Tabebuia</i>) which is of great commercial value. There are no known occurrences of <i>Roseodendron</i> in Guyana. It is instead suggested that, if natural populations of these species (<i>Handroanthus</i> spp. <i>Tabebuia</i> spp. and <i>Roseodendron</i> spp) are threatened in other endemic countries, consideration be given to listing in Appendix III so that Guyana can continue to harvest washiba commercially within its sustainable management regime.</p> <p>Peru considers that its production of <i>Handroanthus serratafolius</i> comes from well-managed forests and does not support its listing in Appendix II.</p>	<p><u>Qualified support</u> for the listing, if the issues raised by Mexico are satisfactorily addressed and support from major range states active in international trade of products from these genera is obtained. It is noted that the listing proponents are the EU, Colombia and Panama, while the consultation process outlined in the proposal (to which only 4 countries had responded in the version reviewed) was led by Costa Rica; Costa Rica’s role should be clarified. The listing of these 3 genera would add over 100 species to Appendix II, many for “look-alike” reasoning as opposed to being threatened by trade; Mexico’s comments on the ability to differentiate species within the genera need to be given due weight when considering whether to list at the genus level. It will be crucial for this proposal to obtain the support of Brazil, Peru and other major exporters of products from these genera.</p>

2. Deletion of <i>Dalbegia sissoo</i> from Appendix II	None.	<u>Support</u> for the proposal provided proponent India can provide evidence of the ability to identify this species in products in trade and the exemption from the listing is restricted to specimens from India.
3. Transfer from Appendix II to Appendix I <i>Paubrasilia echinata</i>	None.	<u>Support</u> for the proposal submitted by the range state (Brazil).
4. Include <i>Dipteryx</i> genus in Appendix II with new annotation	None.	<u>Qualified support</u> for the proposal (which is submitted by the same parties as proposal #1) assuming support of major exporters is forthcoming. The proposal notes that a consultation was sent to all range states by the EU, but there was no information contained in the proposal at the time of review about any responses to the consultation. As for proposal #1, it will be crucial for this proposal to obtain the support of Brazil, Peru and other major exporters of <i>Dipteryx</i> products. More justification for the genus level listing to include all species beyond the 4 target species should be provided, including country experiences in identifying different species in the genus. Trade data for seeds from <i>Dipteryx</i> species should be included to justify a new annotation including seeds.
5. Include <i>Afzelia</i> genus in Appendix II with Annotation 17	None.	<u>Qualified support</u> for the proposal (which is submitted by the EU, Benin, Cote d'Ivoire, Liberia and Senegal) assuming support of major exporters is forthcoming. The proposal notes that a consultation was sent to all range states by the EU, but there was little information contained in the proposal at the time of review about responses to the consultation from major exporters (Ghana was "still considering" the proposal). It will be crucial for this proposal to obtain the support of Ghana, Cameroon, Congo and other major exporters of <i>Afzelia</i> products. More justification for the genus level listing to include all species beyond the 4 target species should be provided, including country experiences in identifying different species in the genus. Note that trade statistics using HS codes for "African mahogany"

		also include <i>Khaya</i> species in some cases since it is also called “African mahogany” in some markets.
6. List African populations of the genus <i>Khaya</i> in Appendix II with Annotation 17	None.	<u>Qualified support</u> for the proposal (which is submitted by the same proponents as listing #5) assuming support of major exporters is forthcoming. The proposal notes that a consultation was sent to all range states by the EU, but there was no information contained in the proposal at the time of review about responses to the consultation from major exporters like Gabon, Cameroon and Congo. It will be crucial for this proposal to obtain the support of major exporters of <i>Khaya</i> products. More justification for the genus level listing to include all species should be provided, including country experiences in identifying different species in the genus. Note that trade statistics using HS codes for “African mahogany” also include <i>Azalia</i> species in some cases since it is also called “African mahogany” in some markets. Also note that significant areas of <i>Khaya</i> plantations have been established in Africa and other tropical regions.
7. Include all African populations of <i>Pterocarpus</i> genus in Appendix II with annotation #17, including already Appendix II listed species <i>P. erinaceus</i> (CoP17, no annotation) and <i>P. tinctorius</i> (CoP18, annotation #6)	None.	<u>Qualified support</u> for the proposal (which is submitted by the EU, Cote d’Ivoire, Liberia, Senegal and Togo) assuming support of major exporters is forthcoming. The proposal notes that a consultation was sent to all range states by the EU, but there was no response to the consultation from many range states apart from some of the co-proponents. It will be crucial for this proposal to obtain the support of major exporters of <i>Pterocarpus</i> products, particularly for species recognized as not yet endangered.
