

MIKES+ Results Framework

Overall Goal:	The impact of illegal killing and wildlife trafficking on African elephant populations and other iconic CITES-listed African mammals is reduced			
Project Purpose:	The CITES MIKE network of collaborating range States and sites in Africa is supported in strengthening the protection of elephants and other CITES-listed African mammals, implementing CITES provisions, and enhancing effective and efficient MIKE site management			
Strategies:	S1: INFORMATION FOR ELEPHANT CONSERVATION ACTIONS AND DECISION-MAKING	S2: PROTECTION OF PRIORITY POPULATIONS OF ELEPHANT AND OTHER ICONIC SPECIES	S3: MIKE SITE MANAGEMENT CAPACITY AND SITE-LEVEL CITES IMPLEMENTATION	S4: NATIONAL ACTIONS IN SUPPORT OF MIKE SITE MANAGEMENT AND CITES IMPLEMENTATION
Results:	<u>Result 1:</u> Information systems for monitoring the status and illegal killing of elephants across the MIKE site network and the illegal ivory trade maintained and enhanced, to inform site-level conservation action and national and international decision-making and awareness	<u>Result 2:</u> Range State wildlife management agencies' efforts to protect priority populations of elephant and other target species in key conservation landscapes strengthened	<u>Result 3:</u> Management practices and procedures aimed at enhancing elephant and other target species conservation across the MIKE site network promoted and strengthened, including the implementation of relevant CITES decisions	<u>Result 4:</u> National actions supporting the effective management of MIKE sites and the implementation of CITES decisions concerning target species and related conservation action strengthened
Outputs:	<u>Output 1.1:</u> Targeted training and support in the use of MIKE monitoring systems and tools adaptively provided to sites in accordance with identified site capacity gaps and needs	<u>Output 2.1:</u> Priority MIKE focal sites selected according to appropriate criteria, and implementing partners identified and engaged	<u>Output 3.1:</u> MIKE site network reviewed and rationalised to ensure optimal coverage of key populations of elephants and other target iconic species, and to identify potential opportunities for MIKE support for strengthening site management practices and procedures, and iconic species conservation	<u>Output 4.1:</u> Key opportunities for supporting national-level wildlife law enforcement, conservation and capacity building initiatives identified, especially where they support and strengthen MIKE site management
	<u>Output 1.2:</u> Data on illegal killing of elephants, patrol effort and law enforcement capacity from participating MIKE sites synthesised, and data reliability verified through <i>in situ</i> testing, statistical analysis and other validation means	<u>Output 2.2:</u> Site-level management and capacity-building priorities for focal sites identified through participatory planning exercises, including determination of further support needs for existing MIKE focal sites	<u>Output 3.2:</u> Specialized law enforcement and management tools and support materials developed for selected topic areas, aimed at assisting PA managers to adopt and implement best management practices	<u>Output 4.2:</u> Implementation of selected national wildlife strategies and plans supported, including ICCWC Wildlife Crime Analytic Toolkit action plans, in accordance with identified key opportunities
	<u>Output 1.3:</u> Management, utility and accessibility of MIKE and related data to range States and participating sites improved through enhanced data management and modelling systems	<u>Output 2.3:</u> Targeted technical, material and financial support provided to selected MIKE focal sites for strengthening the effectiveness of ranger patrols and	<u>Output 3.3:</u> Targeted law enforcement and management capacity building and training provided across the MIKE site network, applying specialised management tools and support materials as appropriate	<u>Output 4.3:</u> Implementation of CITES decisions related to target species supported in selected range States, including development and implementation of species management plans and monitoring

	and more user-friendly, practical and relevant products	ranger-based monitoring in accordance with identified priorities		systems, and reported back to CITES Committees and COP as appropriate
	<u>Output 1.4:</u> Regular and relevant MIKE monitoring information provided to elephant range States and MIKE sites to assist decision-making on management and enforcement	<u>Output 2.4:</u> Targeted technical, material and financial support provided to selected MIKE focal sites for strengthening communication and operational capacity and systems in accordance with identified priorities	<u>Output 3.4:</u> Site-level implementation of key CITES decisions relating to target species populations supported, including site-based implementation of national and regional species conservation strategies and plans	<u>Output 4.4:</u> Collaboration and exchanges between range States in the development and implementation of target species conservation and management plans and monitoring systems promoted
	<u>Output 1.5:</u> Monitoring of the trade in elephant specimens and the status of elephant populations maintained according to priority needs established by CITES Parties	<u>Output 2.5:</u> Targeted technical, material and financial support provided to selected MIKE focal sites for strengthening intelligence and investigations capacity and systems in accordance with identified priorities	<u>Output 3.5:</u> Best management practices and procedures, and lessons learnt, documented (linked to MIKE focal site support provided under Result 2)	<u>Output 4.5:</u> Capacity and provisions for managing, storing and disposing of ivory and other confiscated wildlife specimens of target species and forensic analysis supported in selected range States
	<u>Output 1.6:</u> Regular and reliable information on the illegal killing of elephants, population status, and illegal trade in ivory compiled and disseminated internationally through CITES COPs and other appropriate mechanisms	<u>Output 2.6:</u> Targeted technical, material and financial support provided to selected MIKE focal sites for strengthening community engagement in wildlife law enforcement and site management in accordance with identified priorities	<u>Output 3.6:</u> Collaboration and communication between MIKE sites, range States and other partners concerning best management practices and procedures strengthened, including through sub-regional meetings and other mechanisms	<u>Output 4.6:</u> National wildlife agencies supported in identifying and applying for additional resources to address site and national-level wildlife management needs, including facilitating communication and interactions with appropriate donors
