**Subject: Information for the consideration of the next meetings of AC and PC
(Response to Notification 2007/033, Shark and other species)**

Dear Sir or Madam:

On the request of Notification 2007/033, China would like to provide following information for consideration at the 23rd meeting of the Animals Committee.

Sharks:

- i) Except *Cetorhinus maximus*, *Carcharodon carcharias*, and *Rhincodon typus*, which had already been listed in the Appendices, there are no other sharks species in China need to be included in the Appendices.
- ii) China do not land or export the shark species of concern identified by the Animals Committee.
- iii) This is no target fishing of shark species in China while bycatch occurs in deep sea fishery. The quantity of bycatch is not significant, and all these areas are managed by Regional Fishery Management Organizations (RFMOs). For example, the ICCAT adopted decision in 2007, which request the parties to report the harvest quantity of *Lamna cornubica* and *Isurus oxyrinchus*, and ask the parties and fishery bodies targeted on these species to minimize the death rate of fishing. The WCPFC decided to identify key species and enhance their management among more than 100 bycatch shark species. At this stage, Chinese government is providing training courses for fishermen, and plans to request the fishery corporations submit information on shark bycatch at species level. All sharks products from bycatch fishery are sent to China.
- iv) Commodity codes for fish products:
Please see Annex I of this letter: Harmonized System Code for Fish Products of China (Valid from Jan.1, 2008).

Other species:

We have no update information on the plant species mentioned by Notification 2007/033. Please understand that, in order to get the latest HS Code for fish products, we have to send this letter after the date required by the Notification No. 2007/033.

Best wishes,

Sincerely yours,

Meng Xianlin

Asunto: Notificación a las Partes No. 2007/033 Ginebra, 5 de octubre de 2007 “Información que ha de someterse a la consideración de las próximas reuniones de los Comités de fauna y de flora”

Estimado señor:

Le enviamos la información que hemos podido recopilar, hasta la fecha, referente a los Tiburones y Cedro, que incluye información de las autoridades que en Cuba son competentes para el manejo y protección de estas especies, aún no todas listadas en los Apéndices de CITES.

Cedrela odorata

En el caso de ***Cedrela odorata*** se ha recabado un esfuerzo adicional de las Autoridades forestales debido a que aun no ha concluido el año y no se cuenta con el balance final y no se había previsto tener la información para ésta fecha (se resumen los datos de todas las provincias hasta el 30 de noviembre, por lo que al final del año 2007 las cifras de las plantaciones se espera que sean superiores).

La especie no es considerada amenazada en Cuba, es abundante tanto en los bosques naturales como en las plantaciones. (Ver lista roja de flora vascular cubana de 2005 que se adjunta)

El país ha desplegado un fuerte esfuerzo en la plantación de Cedro en los bosques de Cuba con la participación de todos los integrantes del Sistema Nacional de Reforestación.

Los reportes del Servicio Estatal Forestal del Ministerio de la Agricultura, hasta noviembre del 2007, indican que se han plantado:

- Plantaciones de áreas forestales donde la especie principal es el Cedro 2332,7 ha con 2 057,1 miles de posturas de Cedros.
- Se Reconstruyeron un total de 1009.1 ha con un total de 657,6 miles de posturas de cedros.
- Se plantaron en áreas enriquecidas de bosques con degradación 404.4 ha con 1349,7 miles posturas de Cedro.

- En áreas de cafetales se plantaron 19,5 miles de Cedros y se repusieron en ares de cafetales plantadas en años anteriores 2400 posturas de Cedro
- Se efectuaron reposición de fallas en las plantaciones del 2005 y 2006 un total de 346,2 miles de plantas de Cedro.

Se han fomentado durante el año como resumen un total de 3746,2 ha con 3 200,7 miles de cedros (3,2 millones de plantas de cedro sembradas)

Tiburones

Se trabajó en la elaboración de un manual de campo para la identificación de las principales especies de elasmobranquios capturados en Cuba, con vistas a capacitar a los pescadores y receptores en puerto en la identificación de las mismas y de esta manera conformar una estadística más detallada y específica al respecto.

El tiburón en Cuba es procesado industrialmente para el aprovechamiento de su carne, aletas y cartílago de manera comercial. En tanto se trabaja en la actualidad en evaluar la factibilidad de aprovechamiento de los hígados con vista a obtener aceite para uso terapéutico en la salud humana.

La carne y los cartílagos son usados en el consumo nacional y las aletas son destinadas a la exportación (secas saladas).

En el 2006 se capturaron 815.8 ton de tiburón y en el 2005 se obtuvieron 429.0 ton (se incluye la pesca incidental).

Entendemos que esta información no da respuesta a todas las interrogantes solicitadas por los Comités de Fauna y Flora ya que se requiere de implementar sistemas para la recopilación de información de estas especies que no siempre están disponibles. Le pedimos a la vez nos dispense por haber entregado esta información con retraso

Aprovecho la ocasión para saludarle cordialmente,

INFORME DE ECUADOR PARA LA 23ª REUNIÓN DEL COMITÉ DE FAUNA DE CITES

TIBURONES

INFORMACION GENERAL

El Ecuador cuenta con un Plan de Acción Nacional para la Conservación y el Manejo de Tiburones PAT – Ec que fue consensado por todos los actores que intervienen en el manejo y la conservación de dicho recurso. Responde a una necesidad de ordenamiento pesquero que se plantea dentro del marco del “*Plan de Acción Internacional para la Conservación y Ordenación de los Tiburones, PAI-Tiburones*”. su preparación ha sido coordinado por el Instituto Nacional de Pesca, Autoridad Científica CITES.

En el Ecuador continental e insular es área de distribución de 92 especies de elasmobranquios que se agrupan en 58 especies de tiburones, 32 especies de rayas, una especie de quimera y una especie de catanuda. Las familias de tiburones que principalmente se desembarcan por las flotas industrial y artesanal son: Alopiidae, Carcharhinidae, Lamnidae, Sphyrnidae y Triakidae; mientras que en el grupo de las mantas y las rayas, las más representativas son: Dasyatidae, Mobulidae, Myliobatidae, Rajidae y Rhinopteridae .

De estas especies 24 se encuentran referidas en el Anexo 3 CoP14 Doc. 59.1 que recoge el listado de las especies objeto de preocupación para la CITES.

Los tiburones en el Ecuador son usados en su totalidad, el cuerpo para consumo de carne y exportación, las aletas enteras para exportación y en pedazos (subproducto –banderita) para la producción de fibra para consumo interno en la preparación de sopa. Vísceras y desechos de aletas (se usa para elaboración de harina de pescado)

La exportación de tiburones y subproductos en se la realiza bajo 6 partidas arancelarias NANDINAS 0302650000 (escualos), 0303750000 (escualos) 0304100000 (frescos y refrigerados), 0304200000 (filetes congelados) , 0305591000 (aletas de tiburón y demás escualos), 0305599000 (los demás – desperdicios de tiburón). No se cuenta con partidas diferenciadas por especies.

El plan tiene como objetivo, garantizar la conservación y el manejo sostenible de los tiburones, rayas, guitarras y quimeras (pejegallo) que se encuentran en las aguas de Ecuador, amparados en el marco del Código de Conducta para la Pesca Responsable y en las leyes nacionales, regionales e internacionales a las que se ha suscrito Ecuador

El logro de este objetivo está basado en tres principios: Manejo participativo, Sostenimiento de las poblaciones y Consideraciones nutricionales y socioeconómicas.

Los componentes del plan son:

1. Sistemas de Información y Monitoreo e Investigación Aplicada que incluye
 - a) Mejoramiento de la obtención de datos de pesquerías,
 - b) Mejoramiento de la obtención de datos por especie;
 - c) Obtención de datos de turismo y pesca deportiva;
 - d) Manejo de los datos, y
 - e) Investigación aplicada
2. Regulaciones manejo e incentivos;
3. Control y vigilancia ;
4. Educación y sensibilización

ASPECTO RELEVANTES DE LA IMPLEMENTACIÓN DEL PAT - Ec.

Decreto 486

Con base en el PAT- Ec el Ecuador emitió el Decreto 486 el 20 de julio del 2007, que tiene como propósito. "Expedir las Normas para la regulación de la Pesca Incidental del Recurso Tiburón, su comercialización y Exportación en el Ecuador Continental.

Mediante este Decreto se prohíbe la pesca dirigida específicamente al recurso tiburón y por tanto el uso de artes de pesca que se empleen exclusivamente para ello como el palangre tiburonero, igualmente se prohíbe el uso de cable acerado (huaya) en las partes terminales de los reinales o líneas secundarias de los artes de pesca usados para la captura de otras especies comerciales y de dispone el cambio por material de poliamida monofilamento..

En el decreto se prohíbe la práctica del aleteo, es decir la captura de tiburones con el exclusivo propósito de extraer sus aletas, permitiéndose únicamente el desembarco de cuerpos enteros producto de la pesca incidental realizada por embarcaciones registradas por la Subsecretaría de Recursos Pesqueros.

Se contemplan igualmente sanciones por la inobservancia del decreto y la incineración del producto retenido negándose la posibilidad de donación, venta o exportación.

El decreto tiene una disposición expresa de no captura de especies listadas en los apéndices de CITES y no permite la internación, trasbordo o importación de tiburones aún si estos han sido capturados en aguas internacionales.

Dispone que la comercialización de aletas producto de la pesca incidental se realice previo la obtención de un Certificado de Monitoreo de Pesca Incidental que contendrá detalle de las especies, número y peso de cuerpos y aletas, además de otra información considerada relevante; documento que acompaña al producto y es canjeado en las diferentes etapas de comercialización estableciéndose así una cadena de custodia verificable en cualquiera de sus fases hasta la exportación.

La implementación del decreto supuso la elaboración de material divulgativo y una guía para el reconocimiento de las especies comercializadas con enfoque a los pescadores e inspectores de pesca.

La evaluación de la puesta en marcha del decreto se la realiza a través de un Programa de Control de la pesca incidental de tiburones en la costa continental que se circunscribe en los ámbitos de control, capacitación y comunicación, e incluye:

- Monitoreo de los desembarques asociados con la captura incidental de tiburones
- registro de composición de las capturas por especie
- registro de la pesca incidental; emisión de certificados de monitoreo de esta pesca
- emisión de las guías de movilización de la pesca incidental
- registro de los artes de pesca utilizados
- capacitación del sector pesquero artesanal, capitanías de puerto y unidades de la policía ambiental
- desarrollo de una base de datos para registro y procesamiento de la información

El primer informe trimestral se encuentra disponible y se adjunta como en Anexo 1

Iniciativas de investigación sobre tiburones

Se ha realizado esfuerzos de investigación que reportan datos sobre especies de tiburones, entre otros se citan:

1. Fortalecimiento del Monitoreo Biológico en el Área Marina del Parque Nacional Machalilla a través de la Participación Interinstitucional en Investigación Marina, que lo ejecuta el Instituto de Ecología Aplicada, Universidad San Francisco de Quito, Autoridad Científica CITES.

El proyecto contempla el consolidar los procesos de conocimiento biológico que demuestren la biodiversidad marina presente en el Parque Nacional Machalilla y el alto grado de conectividad biológica con el resto del área considerada Corredor Marino del Pacifico Este Tropical. Los monitoreos reportan 6 especies de tiburones *Squatina armata*, *Rhinobatos glaucostigma*, *Urobatis helleri*, *Manta birostris*, *Aetobatus narinari*, y *Rhinobatos prahli*. También se obtienen datos de desembarcos reportándose 8 especies *Notorynchus cepedianus*, *Pseudocarcharias kamoharai*, *Alopias vulpinus*, *Mustelus dorsalis*, *Mustelus lunulatus*, *Prionace glauca*, *Triaenodon obesus*, y *Sphyrna media*.

2. Criterios a considerar para la protección de los Tiburones en la Reserva Marina de Galápagos, lo lleva a cabo la Fundación Charles Darwin Autoridad Científica CITES, el trabajo describe la información existente sobre el estado, la ecología y biología básica de las especies de tiburones que habitan en el archipiélago de Galápagos, su importancia turística y los aspectos de control y manejo que se han implementado para su protección, considerando la experiencia mundial de su pesquería y captura incidental.

De las 29 especies de tiburones presentes en el Archipiélago de Galápagos, el 76 % se encuentra incluida en la Lista Roja de UICN, dos bajo la categoría de “*vulnerable*” (7 %), trece en “*bajo riesgo*” (44 %) y siete en “*datos insuficientes*” (24 %). Dentro de la categoría *vulnerable* encontramos al tiburón ballena y en *casi amenazado* a tiburón de Galápagos, tiburón de puntas negras, tintorera y martillo, especies que corresponden a cinco de las seis más importantes para el turismo submarino de las islas Galápagos.

3. Programa de investigación y conservación de los tiburones de la Reserva Marina Galápagos , ejecutado por la Fundación Charles Darwin que realiza monitoreos continuos, en el último viaje, se realizó un seguimiento continuo de un tiburón martillo por 44 horas, y se marcaron 2 tiburones ballena y 30 tiburones martillo, además de obtener toda la información registrada en los monitores submarinos instalados con anterioridad.

Se ha logrado colocar dos marcas satelitales en tiburones martillos, que a la fecha están emitiendo datos de sus posiciones, siendo la primera vez a nivel mundial que se logra fijar este tipo de marca en un tiburón martillo. Con esta información se pretende recabar datos sobre los patrones migratorios de los martillos.

De los datos obtenidos se ha podido establecer que los martillos residen en Galápagos durante gran parte del año, y que se mueven continuamente estableciéndose conectividad entre Isla del Coco, Malpelo y Galápagos sugiere la existencia de corredores biológicos marinos cuyas rutas, todavía desconocidas, deberán ser descubiertas, con el fin de localizar los sitios y áreas prioritarias para la protección de los tiburones migratorios.

4. Monitoreo de la pesca artesanal, realizado por el Instituto Nacional de Pesca Autoridad Científica CITES.
5. Tiburones del Ecuador: Casos de estudio, elaborado por la Escuela de Pesca del Pacífico Oriental EPESPO y el Programa de Recursos Pesqueros PMRC.
6. Informe trimestral de monitoreo de la pesca incidental de tiburones en los principales puertos de desembarque de la costa ecuatoriana y elaboración de base de datos, realizado por la Subsecretaría de Recursos Pesqueros con el financiamiento de Conservación Internacional a fin de obtener información de la aplicación del Decreto 486 que regula la pesca incidental de los tiburones.

Otras fuentes de información relevante para la gestión de los tiburones lo constituyen los Registros de los decomisos de productos y aletas de tiburón, información que sistematiza el Parque Nacional Galápagos al igual que los informes de guías naturalistas sobre tráfico, varamiento, avistamientos de especies vivas y muertas, irregularidades de barcos pesqueros nacionales e internacionales

Response to CITES Notification 2007/033 by The European Community and its Member States

Information to be submitted for the consideration of the next meetings of the Animals and Plants Committees

a. Sharks

i) Parties should report progress in identifying endangered shark species that require consideration for inclusion in the Appendices, if their management and conservation status does not improve [paragraph b) of Decision 14.104];

Response:

Sharks are fish species whose conservation falls within the domain of the Common Fishery Policy (CFP) based on the Council Regulation (EC) N° 2371/2002 of 20 December 2002 on the conservation and sustainable exploitation of fisheries resources under the CFP. Within EC legislation there are provisions dealing with output management, technical measures, control, fleet and market policy which is the framework for ensuring a sustainable exploitation of elasmobranch.

Currently it is prohibited for Community vessels to retain on board, to tranship and to land in any waters (Community or non-Community waters) two CITES listed species, Basking shark (*Cetorhinus maximus*) and white shark (*Carcharodon carcharias*), given their poor state and lack of information to carry out a relevant evaluation. This is meant to stop any fisheries development in any area. Furthermore the EC Wildlife Trade Regulation, implementing CITES in the EU, includes in its Annexes the shark species listed in the CITES Appendices.

The European Community had submitted proposals for listing of *Lamna nasus* and *Squalus acanthias* in Appendix II of CITES for CoP14 (CoP14 Prop. 15 and CoP14 Prop. 16).

No specific or additional measures or programmes have been developed so far to identify further species for inclusion in CITES Appendices.

ii) Parties landing and exporting products from shark species of concern identified by the Animals Committee (see Annex 3 to document CoP14 Doc. 59.1) should report on the fisheries, environmental and international trade management measures adopted, levels of landings and exports, and the status of these stocks and fisheries [paragraph c) of

Decision 14.108];

Response:

The following site is the link to the Report from the elasmobranch group from ICES with some of the concerned species and their current situation. It also includes detailed catch figures.

<http://www.ices.dk/reports/ACFM/2007/WGEF/WGEF07.pdf>

The European Commission is currently looking into the EU database FIDES (landings reported by EU Member States) as well to retrieve relevant data. We plan to provide this additional information on landings of a number of shark species at a latter stage.

iii) Shark fishing and trading entities, particularly the major fishing or trading entities (Indonesia, the European Community, India, Spain, Taiwan (province of China), Mexico, Argentina, the United States of America, Thailand, Pakistan, Japan, Malaysia, France, Brazil, Sri Lanka, the Islamic Republic of Iran, New Zealand, the United Kingdom of Great Britain and Northern Ireland, Nigeria and Portugal) are strongly encouraged to identify opportunities to: improve, in cooperation with FAO and relevant fishery management bodies, the monitoring and reporting of catch, bycatch, discards, market and international trade data, at the species level where possible and to establish systems to provide verification of catch information [paragraph c) of Decision 14.115]; and

Response:

FAO IPOA

The European Commission intends to adopt in December 2008 a Communication with an EU Plan of Action for the conservation and management of sharks. The implementation of the Plan of Action will entail the modification of a number of existing regulations and, likely, the adoption of new ones.

The main objective of the Community action plan will be:

1. Deepening the knowledge on shark species and their role in the ecosystem.
2. Ensure that shark catches from directed fisheries are sustainable and that non-directed fisheries are properly regulated.

RFMOs

Some tuna RFMOs have requirements to provide certain information regarding the capture of sharks, and the technical measures that should be followed in cases of incidental catches. In ICCAT there will be stock assessments undertaken in 2008 on Blue shark (*Prionace glauca*) and shortfin mako (*Isurus oxyrinchus*), and no later than 2009 for porbeagle shark (*Lamna nasus*).

Further information can be obtained from the various tuna RFMOs regarding the individual stock assessments which are provided as public documents on the respective web-sites, as appropriate. The web-sites are as follows:

<http://www.iccat.int/>

<http://www.iattc.org/HomeENG.htm>

<http://www.iotc.org/English/>

<http://www.wcpfc.int/>

We would advise the CITES Secretariat as well to contact the FAO and the various RFMOs which are involved in this issue (in particular RFMOs which are charged with the management of tuna and tuna like species, including sharks) in order to receive information on recent stock assessments and information provided by Parties to these RFMO's in order to avoid duplication of work.

iv) Parties should provide details of their commodity codes for fish products (e.g. fresh/chilled, frozen and dried, processed and unprocessed, meat, oil, skin, cartilage and fins), imports, exports and re-exports, for both CITES-listed and non-listed species (Decision 14.106).

Notification No. 2007/033 page 2

The relevant information is attached in two separate annexes (Excel files)

b. Cistanche deserticola, Dioscorea deltoidea, Nardostachys grandiflora, Picrorhiza kurrooa, Pterocarpus santalinus, Rauvolfia serpentina and Taxus wallichiana

Range States of the above species to report on progress in the implementation of regionally coordinated actions should improve the management of and prevent illegal trade in these seven species, including, inter alia, measures to combat illegal trade, regional capacitybuilding workshops and harmonization of regulations and legislation: [paragraph b) of

Decision 14.20].

Not applicable

c. Orchidaceae spp.

Countries of export and import of *Orchidaceae* spp. included in Appendix II should provide results of efforts to prepare identification material on further exemptions for artificially propagated hybrids of these

orchids, taking into consideration the capacities of countries to implement and control such exemptions effectively [Decision 14.133].

Not available

d. Bigleaf mahogany

All range States of the bigleaf mahogany should submit reports on progress in the implementation of the 'Action plan for the control of international trade in bigleaf mahogany (*Swietenia macrophylla*)' [paragraph 1 e) iv) of the Action Plan adopted through Decision 14.145].

Not applicable

e. *Cedrela odorata*, *Dalbergia retusa*, *D. granadillo* and *D. stevensonii*

i) Range States of the above mentioned species shall:

a) complete and update the available information on these;

b) assess their populations, taking into account inter alia the distribution, cover, density, size structure, regeneration dynamics and changes in land use;

c) report the existence, extent and type of forest plantations of the species; and

d) compile the information related to export of the species, including volumes and products, indicating the percentage from plantations [paragraph 1 of the Action Plan

adopted through Decision 14.146].

Not applicable

ii) All Parties shall:

a) compile the information on the import and export of the species, including origin (wild or cultivated), volumes and products, indicating the country of origin and final destination; and

Response:

Cedrela odorata import data

Please find below at the end of this document the overview of reported imports of *Cedrela odorata* in the European Community.

Cedrela odorata, *Dalbergia retusa*, *D. granadillo* and *D. stevensonii*

In accordance with the Appendix III listings of *Cedrela odorata* (populations of Colombia, Guatemala and Peru) and *Dalbergia retusa* (Guatemala) and *Dalbergia stevensonii* (Guatemala) the species are to be listed in Annex C of the EU Wildlife Trade regulations.

In accordance with Decision 14.146, seven *Cedrela* species (*Cedrela fissilis*, *C. lilloi*, *C. Montana*, *C. oaxacensis*, *C. odorata*, *C. salvadorensis*, *C. tonduzii*) and the three *Dalbergia* species (*Dalbergia retusa*, *D. granadillo* and *D. stevensonii*) will be included in Annex D, except for the populations already listed in Appendix III/Annex C. Inclusion in Annex D will allow the EU, through import notifications to be provided at the point of entry in the EU, to monitor the trade levels into the EU, as requested by Decision 14.146. It is expected that this will come into force in Early 2008.

b) report the existence, extent and type of forest plantations of these species, including exported volumes and products. [paragraph 2 of the Action Plan adopted through Decision 14.146].
